

Creating Custom Property Type Search Buttons

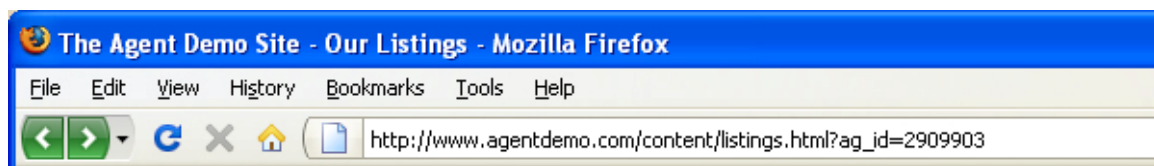

Custom property searches can facilitate the search experience of your website visitors, as well as drive traffic to types of property which you would like to feature. Adding a custom property search to your website is easy, simply follow these steps:

1. Determine what type of property you would like to search.

List of AgentAdvantage® Property Type Codes:

*	All Properties
A	Rental Homes
B	Multi-Family
C	Commercial Properties
D	Sold
E	Resort Homes
F	Farm Properties
G	Golf Course Properties
I	Virtual Tours
K	Co-operative
L	Lots & Acreage
N	New Homes
P	Residential Properties
Q	Rentals
R	Ranch Properties
S	Resort Rentals
T	Townhomes and Condos
U	Resale Homes
W	Waterfront Properties
Y	Single Family Homes
Z	Rental Properties

2. After choosing which property type that best suits your needs, you must then add its code letter to what is called the "Core Code." The Core Code is the basic line of code used by your AgentAdvantage website to search every listing you have available, it is what appears in the browser's address bar after pressing a link to all your listings.

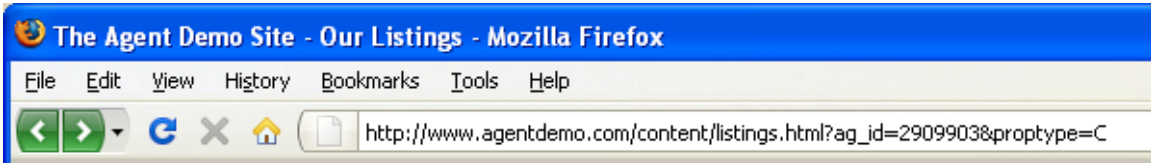

(Browser Address Bar with "Core Code")

Ex: **http://www.agentdemo.com/content/listings.html?ag_id=2909903**

This Core Code will contain your domain name and your unique agent ID number.

3. Place the desired property code at the end of your Core Code.

For example, if you wished to make a link to all of our commercial properties. You will take the Core Code and then add **&proptype=C** to the end, the **C** represents "Commercial Properties"

(Browser Address Bar with "Core Code" plus Property Type Code)

Ex:

http://www.agentdemo.com/content/listings.html?ag_id=2909903&proptype=C

- This code line will now pull up every listing you have on our website that has been categorized as a commercial property. After you have jotted this code down or copied it to our clipboards (Ctrl+C), you can now put this code into our "Navigation Buttons" section of our Control Panel so everyone can easily access all of our commercial properties.

4. First you will go to our Control Panel and click on "Website and Content."

5. Then click on the button "Navigation Buttons."

Layout

Find and activate a new layout by design preference and options.

Navigation Buttons

Edit button text and order or add and remove buttons for your main navigation area.

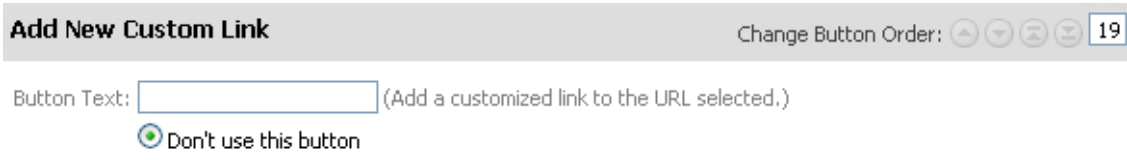

Links Section

Edit the link section options.

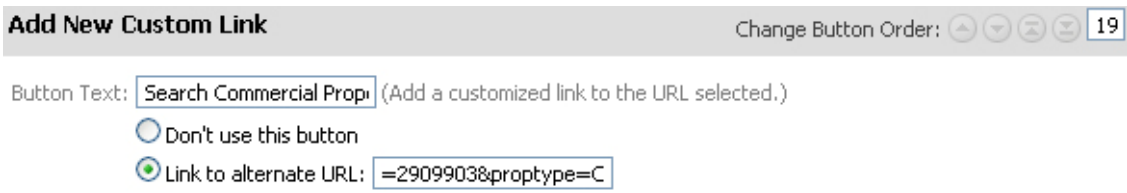

(*"Navigation Buttons" Section*)

6. From there, scroll down to "Add New Custom Link."

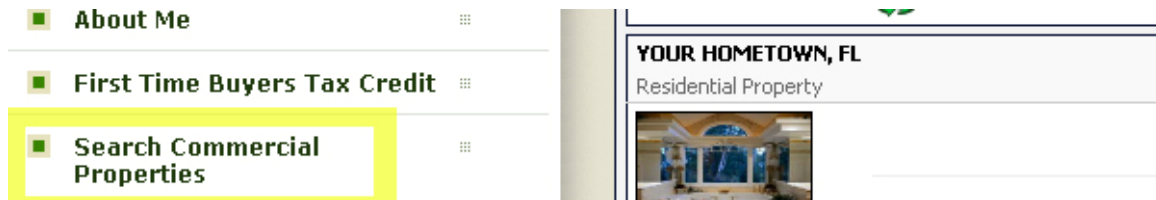

(*"Adding New Custom Link" Section*)

7. There you will put in all the information for your new search link. Here you can name the new link "Search Commercial Properties" and you have pasted (Ctrl+V) the link from our clipboard into the "Link to Alternate URL" Section.

(*Completed "Adding New Custom Link" Section*)

8. After hitting "save" at the bottom of the screen, your link will now be live on your site. Here you can see our highlighted link, and when selected, it will bring your visitors to all our available commercial listings.

(The "Navigation Buttons" Finished Product as it will appear on your site)
